

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.2 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture, by using more water, or by using more fertilizers.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques, by using better seeds, or by using better fertilizers.

There are many ways to meet the world's growing demand for food. It is up to us to decide which way is best.

One of the most important things we can do is to make sure that we are using our resources wisely. This means that we need to be careful about how we use land, water, and fertilizers.

Another important thing we can do is to make sure that we are using the best farming techniques. This means that we need to be careful about how we plant our crops and how we care for them.

There are many other things we can do to meet the world's growing demand for food. It is up to us to decide which way is best.
